

BOUM

About

Young, innovative and versatile: the Boum chair not only expresses a furnishing concept, but also a lifestyle. Its structure, in moulded polypropylene using car manufacturing technology, surrounds the body with its ergonomic padding, upholstered in stain-resistant and liquid-resistant teflon-coated fabric, or in water-resistant polyurethane fabric, also suitable for outdoors. Four types are available: a stackable chair with anodized aluminium legs, a fixed chair and adjustable stool with round swivel base in brushed stainless steel, a swivel adjustable chair with or without armrests, or a chair with a chrome steel base and castors.
